Today, AutoCAD is a major tool used by architects, engineers, drafters, surveyors, contractors, and other professionals for creating architectural designs. Its use in the manufacturing sector is widespread and is sometimes used to develop 3-D models of products. It can be used to create 2-D plans and 3-D models and to perform sheet-metal and 3-D-printing-related operations. AutoCAD has been widely used since it was first introduced in 1982, but its popularity is continuing to increase as its capabilities and ease of use have improved. For example, AutoCAD software can be used to create drawings on a mobile device, and its mobile version is often used as a mobile replacement for desktop AutoCAD. Web-based AutoCAD allows CAD drawings to be created and edited on a computer or other device with a web browser. This article describes the basics of AutoCAD basics, including how to install and use AutoCAD, how to draw a 2-D or 3-D model, how to print a 2-D model, and how to export a drawing to a PDF file. About the Data Used to Create the Examples in This Article The drawings used in this article were created in

AutoCAD using common features, blocks, commands, and options. AutoCAD Data Files To find out which files you need, open AutoCAD and choose Help > About AutoCAD. You can also check the box at the bottom of the window to view the contents of your AutoCAD installation, including data files and AutoLISP files. Download the following AutoCAD data files: This article uses these AutoCAD data files to create the examples shown in the figures. Step 1: Use the AutoCAD Installation Wizard to Begin Before beginning to create a drawing, you must install AutoCAD and some of its components. You can find out how to install AutoCAD in the next section, or you can click here to download the AutoCAD Installation Wizard. The AutoCAD installation wizard will install AutoCAD and its components on your computer and will guide you through the installation. When the AutoCAD installation process is complete, you can start working. Step 2: Begin to Install AutoCAD and Its Components Start the AutoCAD Installation Wizard by clicking here. Follow the steps in the wizard

Mac AutoCAD and AutoCAD LT have been ported to the Mac platform since version 15. AutoCAD LT has a beta version of AutoCAD for Mac available. Mac can also read and write DXF files. It uses the Lucida font family, and has a full Unicode character set (with two variants of the glyphs used for Cyrillic characters). There are a number of third-party applications that include various Mac-specific features. Most of them allow users to create native Mac application. Others support.NET extensions for AutoCAD on Windows systems, or allow users to use AutoCAD's visual LISP language. The market-

I want to know if there is a faster way to perform a. WHERE TableA.ColumnA IN ('A','B','C') b. WHERE TableA.ColumnA IN ('1,2,3','4,5,6') In the case of a. i have to execute this for each value. In the case of b. this is suboptimal in a comma separated list that can have many values (1k+). A: You have to enumerate the comma separated list in a loop: WHERE TableA.ColumnA IN ('1', '2', '3', '4',...) If that was a text field, you could use like: WHERE LIKE '%1%' OR LIKE '%2%' OR LIKE '%3%'... Q: pickerView open at X position I want to open pickerView with a certain position. Is there any way to do that? This is what I tried: [ickerView setFrame:C ca3bfb1094

Type "user" (without the quotes). You will get this message: You need to be an Autodesk Customer or Subscriber to use some features of this software. What can you do to get the activation code? Or how do I get the activation code? A: Go to autocad.com, enter your Serial Number and provide your email id and you will receive the activation code. Otherwise, you can try to get the activation code by using autocad cdkey. But you will be forced to use this tool. [Click Here](#). A: Looks like the "download instructions" for Autocad Autodesk Runtime only work for Autocad 2006/2010 and not 2008/2013. So, if you want to use 2008/2013 Autocad please read this link. Q: How to ensure a column value is always greater than or equal to another? I need to write a PostgreSQL SQL script that ensures that a table has a column value always greater than or equal to the row's ID value. I need this because a row needs to be marked as "confirmed" if the current row's ID is greater than the previous row's ID. The thing is, the previous row's ID value is an integer, so I can't simply add the previous row's ID value to my row's ID value and check if it's greater than the new ID value. Is there a way to write a query that ensures a column is greater than or equal to another column? Example: 

```
SELECT * FROM mytable; id |
fname | lname | confirmed -----+-----+-----+----- 123 | Foo |
Bar | 0 234 | Boo | Boo | 0 345 | Foo | Boo | 0
```

 I need to update the third row to be confirmed, because its ID is greater than the previous row's ID (234 > 123) A: In addition to using lag() as has already been suggested, I would also suggest using a Window Function to do this

Add and edit geometries on the fly: The Easel tool opens to the move cursor anywhere in the drawing and lets you quickly draw new edges or boxes or create splines. (video: 1:32 min.) Refine 2D geometry: Simplify and enhance 2D objects and edit their dimensions without starting a 3D view or modifying the drawing data. The Quick Edit option lets you edit an object's dimensions by entering values on a dialog box. (video: 1:32 min.) Easily view and edit 3D objects: Explore, rotate, and move 3D models. The new 3D pane on the right of the viewing area lets you move, rotate, and view 3D objects. (video: 1:16 min.) On-the-fly 3D drawing: You can work in 2D or 3D with a single drawing session. To switch between modes, simply click the appropriate tab in the ribbon. (video: 1:12 min.) No more blue lines: AutoCAD adds stroke colors and fills to straight line segments automatically. Turn a rectangle into a polygon with a single click, and select only visible faces to make a mesh. (video: 1:17 min.) New Python scripting environment: Extend your work with Python scripts and scripts from third parties. (video: 1:20 min.) Localization: Enhanced text management: Simplify your text documents with pre-defined text styles. (video: 1:24 min.) Smart text: Easily select text that matches the current drawing context. (video: 1:24 min.) Workspace: Enhanced user interface: The ribbon is streamlined to make it more intuitive, with familiar commands moved to the left side of the screen, and new commands are moved to the right. Smart fit: The ribbon is intelligently designed to automatically position new commands at the left or right of the screen. (video: 1:08 min.) Table features: Create a table by choosing a range of rows and columns. Easily add row and column headers. (video: 1:15 min.) Smart page: The page list, which appears at the top of the screen, lets you select a section of the current
